Overview

- application history
- structure of the AIA's and PIAZ's staff and costs
- AIA content history
- SCOPUS Minimum Criteria
- 2019 reviewer comments
- tips and additional valuable help
- cite score and ranking
- future

History

- 2008 – both journals applied for Scopus evaluation:
 - Prilozi Instituta za arheologiju u Zagrebu (PIAZ) passed the evaluation and was accepted
 - Annales Instituti Archaeologici (AIA) was rejected:

“Although the publication has been examined with interest by our Journals' Advisory Committee, and **there can be no doubt that your journal represents a valuable contribution in its field**, our present coverage policy prevents us from acquiring further publications this year within this subject area. The title will be reevaluated for Scopus in 2009.”
- 2019 – both journals re-evaluated, PIAZ passed the evaluation, AIA asked to provide more information, passed the evaluation and was accepted

Structure of the AIA's staff and costs:

- editors, editorial board, editorial committee and reviewers – work *pro bono* (in kind)
- **one member of the staff full time employed** for journal's layout (funds source: Ministry of Science and Education / public funds)
- **language proofreading and translations** payed to external experts (funds source: Ministry of Science and Education / public funds)
- no journal publishing costs (online only from 2013)
- no APC's
- open content (CC BY)
- 2005-present = 1 volume/year (WoS and Scopus 2019-present)

Structure of the PIAZ's staff and costs:

- editors, editorial board, editorial committee and reviewers – work *pro bono* (in kind)
- **one member of the staff full time employed** for journal's layout (funds source: Ministry of Science and Education / public funds)
- **language proofreading and translations** payed to external experts (funds source: Ministry of Science and Education / public funds)
- **journal publishing costs** (funds source: Ministry of Science and Education / public funds)
- **exchange of publications costs** (funds source: Ministry of Science and Education / public funds)
- no APC's
- open content (CC BY)
- 1983-2020 = 1 volume/year; 2021- present = 2 volumes/year (WoS and Scopus)

AIA content history

2005-2019

- Croatian texts, short English summary, short reports on IARH's field work
- **English alternative title, key words, figure captions and Summary from the start**

2019/2020

- one double blind peer review per paper, broadening the published content

2021-

- two double blind peer-reviews per paper, preliminary reports, review papers, professional papers and short reports (no peer-review)
- change of journal's layout
- Croatian or English texts, extended English/Croatian Summary

SCOPUS Minimum Criteria:

- ✓ The Journal should consist of peer-reviewed content
- ✓ The Journal should be published on a regular basis (have an ISSN number that has been registered with the International ISSN Centre)
- ✓ Content should be relevant and readable for an international audience (at minimum have English language abstracts and article titles)
- ✓ The Journal should have a publication ethics and publication malpractice statement

Additionally, it is general policy that a journal needs to have a publication history of at least two years before it can be reviewed for Scopus coverage (Stage 2).

The reviewer comments (2019):

- + The journal consistently includes articles that are scientifically sound and relevant to an international academic or professional audience in this field.
- + The abstracts are in keeping with Scopus English Language requirements.
- Despite being published for quite some time, articles in this title have attracted **few citations** by other titles currently covered by Scopus.
- + In general, the content of the articles is consistent with the scope and aims of the journal.
- + The journal has clear aims and scope/journal policies that are consistent with the journal's content.
- + Peer review type is clearly stated and is supported by appropriate reviewer guidelines.

This is a well organised journal publishing material that is being cited, **although citations are very low**. As the content is likely to interest scholars internationally it will be included in SCOPUS, **although the editors do need to take steps to raise the profile of the journal**.

Journal was founded in 2005 by Institute of Archaeology (Zagreb) and originally entitled Annales Instituti Archaeologici – AIA. Journal publishes results of the archaeological excavations and field surveys, certain professional topics and short reports. It is published once a year (one volume, one number). From vol. IX/2013 it is published in electronic form.

Peer review: peer review, equally national and international peer review, scientific and professional papers, double blind review, double

First year of publication: 2005.

Frequency (annually): 1

Scientific disciplines and subdisciplines: Archeology

Date added to HRČAK: 16.03.2006.

Rights: Journal has an Open Access. Article submission, processing, and publishing are free of charges. Readers are allowed to read, download, copy, redistribute, print, search and link to material, and alter, transform, or build upon the material, or use them for any other lawful purpose as long as they attribute the source in an appropriate manner according to the CC BY licence.

Preliminary typology and contextual analysis of Roman and late antique cooking wares from the Roman rural settlement at Podšilo bay on the island of Rab (north-eastern Adriatic, Croatia)

Preliminarna tipologija i kontekstualna analiza rimskoga i kasnoantičkoga kuhinjskog posuda iz antičkoga ruralnog naselja u uvali Podšilo na otoku Rabu (sjeveroistočni Jadran, Hrvatska)

Key words: Roman rural settlement, coarse cooking ware, late antiquity, eastern Adriatic

The paper presents a preliminary typology of coarse cooking ware from the Roman/late antique layers of the rural settlement at Podšilo bay on the island of Rab. The vessels have been associated with several basic shapes and divided by types, while fabrics have been described macroscopically. Analogies and a contextual analysis were used to propose dating and to assess provenience for well-known wares and to define areas of circulation for those with a more regional distribution. By analyzing the distribution within the settlement, we propose a tentative conclusion on their use within the late st. phase of frequentation, and an attempt at understanding the culinary practices and household use of the ware.

Ključne riječi: Rimsko ruralno naselje, gruba kuhinjska keramika, kasna antika, istočni Jadran

U radu se donosi preliminarna tipologija grube kuhinjske keramike iz rimskih/kasnoantičkih slojeva ruralnoga naselja u uvali Podšilo na otoku Rabu. Posude su interpretirane morfološki prema nekoliko osnovnih oblika i podijeljene u tipove, dok su keramičke strukture opisane na temelju makroskopskih opažanja. Analogije i kontekstualna analiza omogućile su prijedlog datacija te determinaciju provenijencije za keramičke klase šire distribucije odnosno definiciju distribucijskih zona za one regionalne cirkulacije. Analizom distribucije posuda unutar samoga lokaliteta donose se preliminarni zaključci o njihovom korištenju u zadnjoj fazi upotrebe prostora naselja, kao i kulinarskim praksama te kućanskoj upotrebi ovoga posuda.

Introduction

As ascertained by recent multidisciplinary research (most recently in Konestra et al. 2020; Wele et al. 2019), the island of Rab (Kvarner Gulf, north-eastern Adriatic) was dotted by a number of rural productive-residential settlements in antiquity (tentatively *villae*), which developed both on its fertile fields and along the coast (Lipovac Vrkljan et al. 2017; Wele et al. 2019: Fig. 4; Konestra et al. 2021a: Fig. 2; Konestra et al. 2021b; see also Jurković, Turković 2019). Since 2016, research activities have been carried out at one such site, in Podšilo bay, on the Loper Peninsula, in the northern part of the island (Fig. 1). The site was identified upon the discovery of a Roman ceramic kiln, on the northern shore of the bay (Lipovac Vrkljan, Šiljeg 2010). Subsequently, reconnaissance of the severely eroded terraces in the hinterland of the bay identified numerous zones with pottery scatter and accumulations of allochthonous limestone semi-dressed blocks, in the form of cairns and drystone boundary walls, all hinting at the presence of a larger site. Since 2016, multidisciplinary geoarchaeological research allowed first to identify several zones with buried architectural remains and another kiln (Wele et al. 2017: 2019; Wele 2018), and then, thanks to targeted trial trenching, to better define two of these complexes located in the areas locally known as Podkućine and Bell Grad, respectively (Fig. 1). Combining the results of geophysical (GPR and magnetic) prospecting and small-scale excavations, the structure at Podkućine was defined as a utilitarian building, ancillary to the larger settlement and possibly used for storage of some sort of production

activity (Fig. 2) (Konestra et al. 2019). On the other hand, the larger and more articulated complex at Bell Grad seems to have been the central residential and productive building of the settlement (or estate). Here, structures are laid around an open space, possibly a courtyard, developing into wings with multiple rooms. So far, the easternmost part of the complex has been excavated, revealing shallow stratigraphy and a small vat or basin of a yet undetermined function (Konestra et al. 2020: 233–237). Another trench, dug in a more central position in 2021, provided ample data on the architecture and phasing of the complex. In fact, walls here are partly preserved up to ca. 1 m of height, while post-holes and a hearth laid above a defunctionalized mortar pavement are indicative of a late phase of settling within the probably already ruined building (Fig. 2). The layers in question might be interpreted as abandonment and walking surface layers, the latter in phase with both the post-holes and the described hearth. A similar situation was also documented at Podkućine, where post-holes and a large refuse pit (Konestra et al. 2019: 188–190) indicate that this too was subsequently used for habitation (Fig. 3).

Other finds recovered from these late layers tentatively dated to the 5th and 6th c. AD, include an assemblage of coarse cooking wares accounting a minimum number (MNI) of 41 individuals. They were the basis for a preliminary typology which aimed to date more precisely the last occupation phase, identify household activities and cook habits, and determine regional connectivity; exchange patterns. Among the cooking ware there stands out a series of probably red sherdsherds which will also be considered, as they pro-

B. NOWACKI ET AL., PRELIMINARNA TIPOLOGIJA I KONTEKSTUALNA ANALIZA RIMSKOG I KASNOANTIČKOG KUHINJSKOG POSUDA IZ ANTIČKOGA RURALNOG NASELJA U UVALI PODŠILO NA OTOKU RABU (SJEVEROISTOČNI JADRAN, HRVATSKA)

Wele et al. 2019; Jurković, Turković 2019; Konestra et al. 2020; Wele et al. 2019). Na otoku Rabu (Kvarnerski zaljev, sjeveroistočni Jadran) razvijala se u antici i kasnoj antici brojna ruralna naselja. Najbolje poznata su Podšilo na otoku Rabu (Kvarnerski zaljev, sjeveroistočni Jadran) i Podkućine na otoku Rabu (Kvarnerski zaljev, sjeveroistočni Jadran). Na otoku Rabu (Kvarnerski zaljev, sjeveroistočni Jadran) od 2016. godine provedeno je istraživanje na jednom od ovakvih ruralnih naselja, u Podšiloj uvali, na Loper polju, na sjeverozapadnom dijelu otoka. Na temelju multidisciplinarnih istraživanja (najbolje poznata su podšiljska uvala i Podkućine na otoku Rabu) (Konestra et al. 2019; Wele et al. 2019; Wele 2018), a zatim zahvaljujući ciljanoj sondiranju, bolje definirani su dva kompleksa u lokalitetima poznatim kao Podkućine (Bell Grad) i Bell Grad (desno) (izradio: A. Konestra; podloga: Državna geodetska uprava, Javna ustanova Zavod za prostorno planiranje Primorsko-goranske županije).

Sažetak

U radu se donosi preliminarna tipologija grube kuhinjske keramike iz rimskih/kasnoantičkih slojeva ruralnoga naselja u uvali Podšilo na otoku Rabu. Posude su interpretirane morfološki prema nekoliko osnovnih oblika i podijeljene u tipove, dok su keramičke strukture opisane na temelju makroskopskih opažanja. Analogije i kontekstualna analiza omogućile su prijedlog datacija te determinaciju provenijencije za keramičke klase šire distribucije odnosno definiciju distribucijskih zona za one regionalne cirkulacije. Analizom distribucije posuda unutar samoga lokaliteta donose se preliminarni zaključci o njihovom korištenju u zadnjoj fazi upotrebe prostora naselja, kao i kulinarskim praksama te kućanskoj upotrebi ovoga posuda.

Prima rezultata istraživanja multidisciplinarnih istraživanja (najbolje poznata su podšiljska uvala i Podkućine na otoku Rabu) (Konestra et al. 2019; Wele et al. 2019; Wele 2018), a zatim zahvaljujući ciljanoj sondiranju, bolje definirani su dva kompleksa u lokalitetima poznatim kao Podkućine (Bell Grad) i Bell Grad (desno) (izradio: A. Konestra; podloga: Državna geodetska uprava, Javna ustanova Zavod za prostorno planiranje Primorsko-goranske županije).

Velika većina posuda, osim očito gornje mediteranske i porfirske, izrađena je od sirove keramičke strukture s namjerno dodanim i obrubljenim kalcitonim ili wignonom, a umutar koje su makroskopskom analizom pokazale istu vrstu venkasta zrnca. Poroznost je niski ili vrlo niska, a keramički materijal je uglavnom tvrd.

Ostali lončari i drugi kasseroli – sve s ravnom dnom – ukazuje na kuharje na otvorenom ognjštu, što je moglo postati diti i naknadnog ogrijača u sklopu istraživanja na području Bell Grada, koje bi moglo upućivati na samo na promjenu u načinu kuhanja u odnosu na ranije antičko doba. Jedno istraživanje u kuhinjskom prostoru, koje se odnosi na kaolajnički prostori kuhanja i ogrijača.

Najbolje poznata su podšiljska uvala i Podkućine na otoku Rabu (Kvarnerski zaljev, sjeveroistočni Jadran) i Podkućine na otoku Rabu (Kvarnerski zaljev, sjeveroistočni Jadran). Na otoku Rabu (Kvarnerski zaljev, sjeveroistočni Jadran) od 2016. godine provedeno je istraživanje na jednom od ovakvih ruralnih naselja, u Podšiloj uvali, na Loper polju, na sjeverozapadnom dijelu otoka. Na temelju multidisciplinarnih istraživanja (najbolje poznata su podšiljska uvala i Podkućine na otoku Rabu) (Konestra et al. 2019; Wele et al. 2019; Wele 2018), a zatim zahvaljujući ciljanoj sondiranju, bolje definirani su dva kompleksa u lokalitetima poznatim kao Podkućine (Bell Grad) i Bell Grad (desno) (izradio: A. Konestra; podloga: Državna geodetska uprava, Javna ustanova Zavod za prostorno planiranje Primorsko-goranske županije).

AIA Future

- from open content to open access
- technical changes to meet new requirements
- acquiring persistent identifier (DOI)
- improving content, citations and journal's visibility
- DOAJ, Sherpa-Romeo
